

Release Notes: **Legends 4K™ Firmware 6.1.13 for Legends Pinball 4KP (August 4, 2025)**

Firmware Update Live Date: August 4, 2025

Highlights

A new System Update v6.1.13 for all Legends Pinball 4K™ devices is now available! In addition to general stability and performance improvements, this update also includes the following new features:

- New AAF Payment Feature for qualified customers
- Component Update Removal: new table packs now will install with all artwork instantly- no separate component update needed
- Stability improvements and optimized leaderboard performance

These system updates will automatically appear for download when you power on your internet connected Legends 4K™ device. Simply follow the on-screen instructions to complete the process.

IMPORTANT:

As part of this update, some U.S. customers will be prompted to complete a one-time order number verification directly on their device. This security enhancement helps protect your machine and account. Please have your AtGames E-Store or Kohl's order number ready- this will be required to continue using your Legends 4K™ device.

Miscellaneous

- For the latest information on future releases, please follow AtGames on Facebook (@AtGamesGaming), Twitter/X (@AtGamesGaming), or Instagram (@atgamesgaming).
- Legends 4K™ Pinball Packs can be found [here](#).

Known Issues

1. Users may see a Legends ID sign in message even if they are already signed in.
2. Users may experience slight flipper lag in OTG depending on their graphics card.
3. AAF - Users will see receipt from ArcadeNet when making their AAF monthly purchase.
4. AAF - Users may need to select "Logout" twice in a row to successfully log out.
5. AAF - Upon completion of the final payment for the AAF Plan, no confirmation of full ownership is sent to the customer via email or on-device notification.
6. Accelerometer can not be adjusted or disabled.
7. The plunger sensitivity has a small dead zone and minimal lag affecting visual feedback. A fix is being worked on for future builds.
8. On rare occasions, CE-4K may crash to a black screen with a "Critical Error" pop-up. If this happens, you should restart your Legends Pinball 4KP device.
9. Wireless Pairing does not scan automatically on some rare occasions. In this case, the Bluetooth devices will not be listed. Restart your Legends Pinball 4KP device to fix this problem.
10. On rare occasions when you try to connect to a Wi-Fi or Ethernet network, CE-4K may crash.
11. Bluetooth headsets are currently not fully supported. While they will pair in the Wireless Pairing screen, audio will not be sent to them.
12. Switching the Flipper and Nudge buttons inside of the Pinball Settings does not function within Zen pinball tables.
13. Over time, users may experience some screen tearing when flipping through the UI. If this occurs, restarting your Legends Pinball 4KP will correct the issue. A fix for this is being worked on.
14. In some cases, while a device is offline, Zen tables scores may not save to the local leaderboard. They will reappear when the device is restarted.
15. After a device is idle for an extended period, some Arcade Control Panels (ACP) may exhibit a brief 1-3 second hesitation before responding.
16. After updating firmware, some users may experience loss of audio or static in their speakers. This can usually be remedied by a reboot. If audio issues persist, power down the machine, detach the power cable for 10 seconds, reconnect the power cable, and then turn the machine back on.
